Subject: CyClean Coal Additive for Mercury Reductions - Permit Application for Thomas Hill and New Madrid

Kendall,

Please find attached all forms and supporting information to apply for a permit to construct equipment at AECI's Thomas Hill and New Madrid power plants. The application is for the "CyClean" process to lower mercury emissions from boilers 1 and 2 at Thomas Hill and both boilers at New Madrid. As discussed, I will follow-up with a hard copy version submitted to your attention. I intend to contact Deedra Boyce at (573) 526-0537 to pay the filing fee of \$100.

As I mentioned in our telephone conversations, AECI would like to pursue a pre-permit construction waiver per 10-6.060(1)(C) since emissions from new activities are well below the de minimis limits and SCREEN3 modeling clearly demonstrates impacts below the applicable risk assessment levels (RAL). AECI will promptly submit the waiver of state liability, list of activities, and acceptance of permit deniability once we learn the APCP is in agreement with the waiver option.

If you or your staff should find a need for additional information or clarification, please contact me at your earliest opportunity.

Sincerely,

Todd A. Tolbert
